

Raymond Garrison

Software Architect

Cumming, GA | (678) 787-5465 | Raymond.A.Garrison@gmail.com | linkedin.com/in/raymond-garrison

Summary

Full Stack Developer and Software Architect with over a decade of experience building user-friendly web applications and scalable backend services. Passionate about clean code, thoughtful system design, and working with teams that value versatility and impact. Looking to bring deep technical experience and collaborative energy to a team doing meaningful work.

Skills

Frontend: HTML, CSS/SCSS, JavaScript, React, Vue, Angular

Backend: Node.js, Express, Java/Spring, TypeScript, MongoDB, SQL, RabbitMQ

DevOps & Tools: Git, Docker, AWS, Azure, GitLab CI/CD, Red Hat OpenShift

Work Experience

AmeriSave

September 2019 - Present

Software Architect (Oct 2021 – Present)

Senior Software Engineer (Sept 2020 – Oct 2021)

Software Developer II (Sept 2019 – Sept 2020)

- Instrumental in the creation of the Online Mortgage Application wizard (Angular/TypeScript), streamlining a previously manual process for thousands of applicants
- Designed and built the Applicant Portal (Vue), giving borrowers real-time visibility into loan status and document requirements
- For the past four years, the sole consistent owner of the Applicant Portal through waves of team turnover. Acting as the team's de facto subject matter expert and primary onboarding resource for new developers, sustaining the project's stability and evolution without a dedicated, stable team.
- Maintained and enhanced business logic rules engine (Java) and legacy ColdFusion systems while transitioning core functionality to modern stack

ADP

May 2016 - September 2019

Senior Application Developer (Aug 2018 – Sept 2019)

Application Developer (May 2016 – Aug 2018)

- Full stack developer on MERN stack applications serving internal and external users
- Built Node.js microservices that served and integrated ADP data with third-party systems, enabling new data partnerships
- Collaborated with UI/UX to build the Billing Review Console (React), surfacing previously missed revenue through improved data visualization

AppSolutions

July 2018 – October 2018

Web Developer (Project-based, Jul 2018 – Oct 2018)

- Built a serverless, fully-responsive React application on AWS that analyzes user spending patterns by parsing transactional emails
- Architected a Lambda function that receives emails, extracts purchase data, stores raw copies in S3, and forwards receipts to users
- Data processed and stored in DynamoDB, served to frontend for real-time budget insights

BetterCloud

June 2015 – May 2016

Product Developer (Jan 2016 – May 2016)

- Developed and maintained Java microservices using Spring Boot, contributing to multiple backend services powering core product functionality
- Built the customer-facing registration flow using Angular, creating a seamless entry point for new users

Software Engineer in Test (Jun 2015 – Jan 2016)

- Designed and implemented automated functional tests using Spock, Geb, Groovy, and Java, improving release confidence and reducing manual regression effort
- Led development of the Autobots project, a custom testing microservice that simulates internal and external API behavior, enabling teams to test microservices in complete isolation without downstream dependencies

The Home Depot

January 2014 – May 2015

IT Developer

- Member of the Item Data Management team, ensuring product data accuracy across Home Depot's website and in-store systems while maintaining the vendor portal used by suppliers to onboard new items
- Translated complex business requirements into automated workflow scripts using object-oriented JavaScript within Stibo's workbench, streamlining data ingestion and validation
- Served as a frontline troubleshooter for production issues, rapidly diagnosing root causes and implementing fixes to minimize business disruption

Education

Georgia Institute of Technology

Bachelor of Science in **Computer Science**

Graduated: **December 2013**

Threads: **Media and Devices**
